

Critical Spares Policy

Asset Operations – fleet-wide

David Chen · 02 April 2025 · OPS-POL-0003

1. Purpose

This policy defines which spare parts Weyland holds for its operating assets, where they are stored and who may release them. It balances capital tied up in stock (EUR 4.6 m at the end of 2024) against lost production during long lead times.

2. Criticality classes

Class	Definition	Rule
A	Unit stop, lead time > 8 weeks	Regional stock or pool agreement; reviewed quarterly
B	Unit stop, lead time 4–8 weeks	Minimum stock based on failure history
C	Consumables	Min/max, automatic reorder

3. Responsibilities

- Asset Operations Manager: owner of the policy and of the A-list.
- Site managers: stock counts twice a year (March and September), reorder requests.
- Procurement: framework agreements and pool contracts.
- Finance: valuation and annual impairment review.

4. Release of parts

Parts from regional stock may be released by the site manager. Class A parts used at another site than the owning asset require approval by the Asset Operations Manager and an internal recharge. Where an O&M contractor holds stock under a full-service agreement (e.g. Highline Wind Services at Kestrel Ridge), the contractor's stock list is reviewed annually against this policy.

5. Review

This policy is reviewed annually or after any event where a missing spare part extended downtime by more than 7 days.

Approved: David Chen, Asset Operations Manager – Dr. Amara Okafor, Chief Operating Officer – 2 April 2025
