

Fisheries Liaison and Coexistence Plan

Harrow Bay Offshore Wind

Tom Berger · 16 March 2026 · HB-CE-PLN-0003

1. Purpose

This plan sets out how Weyland will work with fishermen during the construction and operation of Harrow Bay Offshore Wind. The aim is safe coexistence: fishermen can plan around our works, gear is not lost, and disruption is compensated fairly.

2. Who fishes the area

Fleet segment	Vessels	Gear	Main season
Inshore potters (Harrow Bay, Eastholm)	34	Crab and lobster creels	Apr – Nov
Inshore netters	6	Static nets	Year round
Nephrops trawlers	9	Light otter trawl	Oct – Apr
Scallop dredgers (visiting)	4–8	Dredges	Nov – Mar

3. Liaison arrangements

- Fisheries Liaison Officer: Ingrid Solberg (Marine Coordinator), supported by a Fishing Industry Representative, Dougie Main (Harrow Bay Fishermen's Association).
- Notices to Fishermen weekly during offshore works, by email, SMS and on the harbour noticeboards.
- Meetings with the Harrow Bay Fishermen's Association and Eastholm Inshore Fishing Group every quarter, more often during cable lay.
- Guard vessels recruited from the local fleet wherever possible (8 local boats under contract in 2026).

4. Gear relocation and compensation

Where creels must be moved for cable lay or piling, the FLO agrees a relocation with each skipper at least 14 days in advance. Relocation and lost fishing time are paid according to the published rates; disputes go to an independent fisheries assessor.

5. Safety zones

500 m safety zones around active construction vessels (e.g. MV Sea Atlas) and 50 m around installed structures awaiting commissioning.
