

IT Acceptable Use Policy

Katarzyna Nowak · 14 April 2026 · WE-POL-IT-002

1. Purpose

This policy describes how you may use Weyland IT systems – laptops, phones, email, chat, the file sync & share platform, SCADA access and cloud services – so that we stay secure and productive.

2. Do

- Lock your screen when you leave your device (Windows+L / Ctrl+Cmd+Q).
- Use multi-factor authentication on every account; never share codes.
- Store work files in the team spaces on the file platform, not on the desktop or USB sticks.
- Share with externals via share links with an expiry date and – for confidential content – a password.
- Report suspicious emails with the 'Report phishing' button.

3. Don't

- Install software that is not in the software catalogue without an IT ticket.
- Use private cloud storage or AI tools that are not approved for company data.
- Connect private devices to the OT/SCADA network – ever.
- Forward company emails to private accounts.

4. Private use

Occasional private use of the internet and email is allowed if it does not affect work or security. Private data has no protection from deletion when a device is reset.

5. Monitoring

Weyland does not monitor individual behaviour. Logs are evaluated only for security incidents, in line with the works council agreement on IT systems (BV-2025-03).

6. Leaving Weyland

Return all devices on your last day; your accounts are disabled at 18:00.
