

Grid Connection Application – Fenwick Battery Storage

Submitted to NordGrid Transmission, July 2026

Liam McAllister · 13 August 2026 · FW-GRD-APP-0001

Part A – Applicant

Field	Entry
Applicant	Weyland Energy GmbH, Am Sandtorkai 41, 20457 Hamburg
Contact	Kwame Mensah, Battery Storage Developer; Ahmed Rahimi, Grid Connection Specialist
Application type	New connection – storage (import and export)
Date of submission	15 July 2026

Part B – Connection request

Parameter	Value
Point of connection	Fenwick 132 kV substation, new bay
Maximum export capacity	100 MW
Maximum import capacity	100 MW
Energy storage capacity	200 MWh (2-hour duration)
Technology	Lithium iron phosphate (LFP) battery, grid-forming capable PCS
Requested connection date	30 September 2029
Reactive capability	0.95 lagging to 0.95 leading at point of connection
Short-circuit contribution	1.2 p.u. for 150 ms (grid-forming mode)

Part C – Site

Land east of Fenwick 132 kV substation, 6.2 ha, under option to the applicant since 30 April 2026. Site plan and red-line boundary attached (Annex 1).

Part D – Technical data

- Two 33/132 kV transformers, 2 × 60 MVA, ONAN/ONAF
- Eight 33 kV feeders, 12.5 MW each
- Estimated annual throughput: 365 equivalent full cycles
- Harmonic emission: IEEE 519 compliant, studies to follow

Part E – Application fee

Application fee EUR 48,600 paid on 15 July 2026 (payment reference FW-GRD-2026-07).

Annexes

- Annex 1 – Red-line boundary (FW-GEN-DWG-0001)
- Annex 2 – Evidence of land rights (option summary)
- Annex 3 – Single line diagram (indicative)
- Annex 4 – Letter of authority

NordGrid acknowledged receipt on 22 July 2026 and confirmed the application as competent on 12 August 2026. Offer expected Q2 2027.
