Your update on the Harrow Bay Offshore Wind project – Summer 2026

Foundations are going in

On 7 April the first of 40 foundations was installed 38 km off our coast. By the end of June ten huge steel monopiles – each 9.5 metres wide and heavier than 1,200 tonnes – stood on the seabed, topped with bright yellow transition pieces. You may have seen the jack-up vessel MV Sea Atlas leaving the Port of Eastholm with three piles at a time.

Protecting marine life

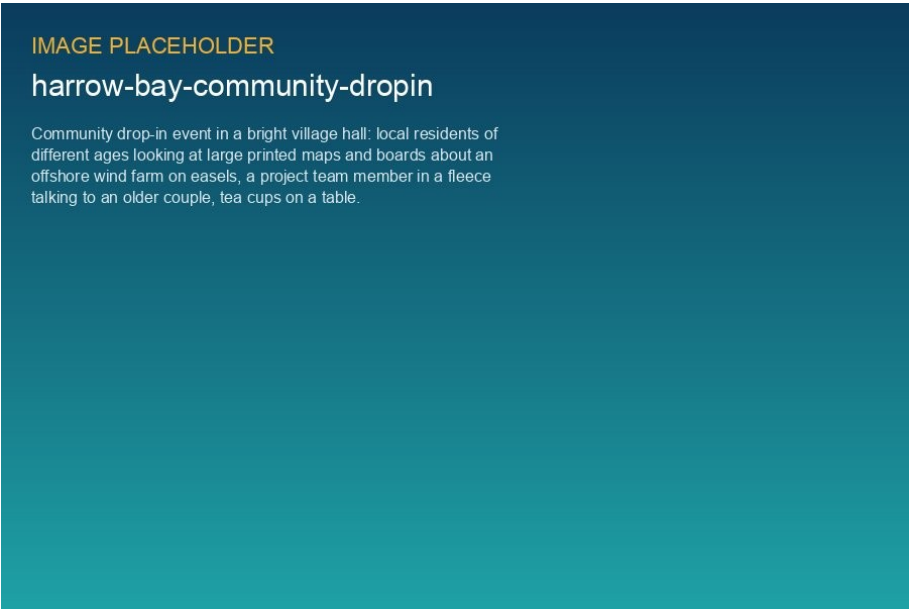

Piling is noisy under water. We surround every pile with a double curtain of air bubbles, which reduces the noise by more than 12 decibels, and specialist observers check that no seals, dolphins or porpoises are close by before work starts. In July we pause piling completely to protect marine life during a sensitive period.

Working with our fishermen

Our Fisheries Liaison Officer Grace Mitchell meets the Harrow Bay & District Fishermen's Association every month. Two local boats are working as guard vessels this summer.

Local jobs

Around 140 people now work at our base in the Port of Eastholm, including 23 apprentices and 61 people from the local area. From 2027 the base will also be the home of around 80 permanent operations and maintenance jobs.

Drop-in session at Harrow Bay Village Hall, 14 May
