

Toolbox Talk – Manual Handling

Toolbox talk – 10 minutes

Hannah Weber · 12 August 2025

Why this matters

Back and shoulder injuries are the most common recordable injuries in our operations (2 of 6 recordables in 2025). Tool bags, spare parts and hatches in nacelles are heavy and the space is tight.

Key points

- Use the nacelle crane and service lift for anything above 15 kg
- Split loads – two light bags instead of one heavy one
- Plan the route: hatches, ladders, tight corners
- Bend your knees, keep the load close, no twisting
- Ask for help – it is not a weakness

Discuss

Which lift in your last job felt awkward? How could we have done it differently?
