

Kestrel Ridge celebrates two years of clean power for the Scottish Borders

Press release

Noah Fischer · 13 March 2026

Edinburgh, 13 March 2026 – On 15 March, the 75.6 MW Kestrel Ridge Wind Farm marks two years of commercial operation. In 2025 its 18 × 4.2 MW onshore turbines produced 206.6 GWh of electricity with a technical availability of 97.4 % and a capacity factor of 31.2 % – among the best results for an onshore wind farm of its age in Scotland.

“Kestrel Ridge shows what a well-run wind farm can do,” said **David Chen, Asset Operations Manager**. “Our site team under Ben Okoye and our partners at Highline Wind Services have kept the turbines running through two Borders winters – including a gearbox exchange on turbine T-07 in January that was completed under warranty in just over three weeks.”

Since 2024 the wind farm's community benefit fund has supported 31 local projects, from a new roof for the village hall in nearby Kestrel Bridge to a minibus for the youth football club. The fund is open for new applications until 30 April 2026.

Open day on 6 June

To celebrate the anniversary, Weyland invites neighbours to a community open day at the site on Saturday 6 June 2026, with guided walks to turbine T-01, a look inside the substation and tea and cakes from the Kestrel Bridge Women's Institute.
