

# First monopile installed at Harrow Bay Offshore Wind

## Press release

Noah Fischer · 07 April 2026

**Edinburgh, 7 April 2026** – Offshore construction at the 480 MW Harrow Bay Offshore Wind farm has begun. In the early hours of this morning the jack-up vessel MV Sea Atlas installed the first of 40 monopile foundations, 38 kilometres off the coast of Harrow Bay.

The monopile, manufactured by Rhenus Steelworks Foundations, is 9.5 metres in diameter and was driven into the seabed in a water depth of 31 metres. A double bubble curtain around the vessel reduced underwater noise during piling to protect harbour porpoises, and Marlow Ecology observers monitored the area before and during the work.

“Seeing the first foundation go in is a moment the whole team has worked towards for years,” said **Felix Brandt, Offshore Construction Manager**. “We will now install foundations in a steady rhythm from the Port of Eastholm, with safety and our environmental commitments always ahead of speed.”

The installation campaign will continue through 2026. The offshore substation is due to be installed in August, and the first Halden HTS-12 turbines are planned for spring 2027.
