

Nordic Onshore Wind – Market Outlook 2026–2030

Jonas Richter · 27 March 2026

Summary

Denmark and Sweden remain attractive for onshore wind and solar, but municipal acceptance (Sweden) and limited land (Denmark) cap volumes. Our pipeline holds 10 Nordic opportunities with 822 MW.

Market	Price level	Main route to market	Key constraint
DK1/DK2	Moderate, high volatility	Corporate PPA, state tender	Land, neighbour acceptance
SE3/SE4	Higher in south	Corporate PPA	Municipal veto, defence radar
SE1/SE2	Low	Merchant / PPA	Grid congestion north-south

Recommendation

Focus on SE3/SE4 and DK1; avoid northern Sweden until transmission reinforcements are in service.
